

Threat Intelligence Investigation

- Analysis of Malicious Hash
- Team Alpha
- Hash: `d55f983c994caa160ec63a59f6b4250fe67fb3e8c43a388aec60a4a6978e9f1e`

Executive Summary

- ♦ 61/72 AV engines flagged file as malicious
- ♦ Identified as Sodinokibi/REvil ransomware
- ♦ High severity threat requiring immediate response

Introduction

- Objective: Analyze suspicious hash
- Tool: VirusTotal
- Method: Threat intelligence enrichment
- Context: Healthcare SOCinvestigation

Findings

- ◆ Detection Ratio: 61/72 (Highly malicious)
- ◆ Malware Family: Sodinokibi (REvil)
- ◆ Type: Trojan / Ransomware / Dropper
- ◆ File Type: Windows PEExecutable

Technical Findings

- Uses Windows Management Instrumentation (WMI)
- Executes dropped files
- Long sleep evasion techniques
- Potential TOR communication

Mohamed Rezaul Karim

- Persistence: T1053 (Scheduled Tasks)
- Privilege Escalation: T1055

Recommendation

Immediate Actions:

- Isolate affected endpoints
- Block hash across all EDR/AV systems
- Search environment for related IOCs

Short-Term:

- Perform full endpoint sweep for lateral movement
- Review scheduled tasks and WMI activity logs
- Monitor outbound traffic for TOR indicators

Long-Term:

- Deploy behavioral detection rules (not just hash-based)
- Implement network segmentation
- Enhance ransomware response playbooks

Conclusion

- Confirmed high-risk ransomware sample
- Immediate containment required
- Deploy YARA detection and monitoring
- Strengthen SOC detection capabilities

Thank You
